5. LCD DRIVING VOLTAGE GENERATOR AND BIAS REFERENCE CIRCUIT

C1=0.1uF~1uF (Non-Polar/6V, default 0.1uF)   C2=0.1uF~1uF (Non-Polar/16V, default 0.1uF)
R1=47KΩ~100KΩ (default 47KΩ)   R2=500KΩ~1MΩ (default 500KΩ)

Figure3. Reference circuit

6. PIN DESCRIPTION

No.	Symbol	Function
1	XV0	XV0 is the LCD driving voltage for common circuits at positive frame.
2	V0	V0 is the LCD driving voltage for common circuits at negative frame.
3	VG	VG is the LCD driving voltage for segment circuits.
4	VSS	Power ground (0V)
5	SLCK	The Serial clock input terminal
6	SDA	The Serial Data input terminal
7	A0	It determines whether the access is related to data or command. A0="H" : Indicates that signals on D[7:0] are display data. A0="L" : Indicates that signals on D[7:0] are command. A0 is not used in 3-line SPI interface and should fix to "H" by VDD1
8	CSB	Chip select input pin. Interface access is enabled when CSB is"L". When CSB is non-active (CSB="H"), D[7:0] pins are high impedance.
9	RESB	Reset input pin. When RSTB is "L", internal initialization is executed
10	VDD	Power supply for logic(+3.0V)

7. MAXIMUM ABSOUTE LIMIT
Maximum Ratings (Voltage Reference to VSS)(for IC)

In accordance with the Absolute Maximum Rating System; please refer to notes 1 and 2.

Parameter	Symbol	Conditions	Unit
Digital Power Supply Voltage	VDD1	-0.3 ~ 3.6	V
Analog Power supply voltage	VDD2	-0.3 ~ 3.6	V
LCD Power supply voltage	V0-XV0	-0.3~15	V
LCD Power driving voltage	VG, VM	-0.3 ~ VDD2	V
Operating temperature	TOPR	−30 to +85	°C
Storage temperature	TSTR	−65 to +150	°C
Notes
1. Stresses above those listed under Limiting Values may cause permanent damage to the device.
2. Parameters are valid over operating temperature range unless otherwise specified. All voltages are with respect to VSS unless otherwise noted.
3. Insure the voltage levels of V0, VDD2, VG, VM, VSS and XV0 always match the correct relation:
   $V0 \geq VDD2 > VG > VM > VSS \geq XV0$

8. ELECTRICAL CHARACTERISTICS

DC CHARACTERISTICS

VDD1=1.8V to 3.3V, VSS=0V; Tamb = -30°C to +85°C; unless otherwise specified.

12. PRECAUTION FOR USING LCD/LCM

After reliability test, recovery time should be 24 hours minimum. Moreover, functions, performance and appearance shall be free from remarkable deterioration within 50,000 hours(average) under ordinary operating and storage conditions room temperature (20$\pm$8°C), normal humidity (below 65% RH), and in the area not exposed to direct sun light. Using LCM beyond these conditions will shorten the life time.

Precaution for using LCD/LCM

LCD/LCM is assembled and adjusted with a high degree of precision. Do not attempt to make any alteration or modification. The followings should be noted.

General Precautions:

1. LCD panel is made of glass. Avoid excessive mechanical shock or applying strong pressure onto the surface of display area.
2. The polarizer used on the display surface is easily scratched and damaged. Extreme care should be taken when handling. To clean dust or dirt off the display surface, wipe gently with cotton, or other soft material soaked with isoproply alcohol, ethyl alcohol or trichlorotriflorothane, do not use water, ketone or aromatics and never scrub hard.
3. Do not tamper in any way with the tabs on the metal frame.
4. Do not made any modification on the PCB without consulting Gemini.
5. When mounting a LCM, make sure that the PCB is not under any stress such as bending or twisting. Elastomer contacts are very delicate and missing pixels could result from slight dislocation of any of the elements.
6. Avoid pressing on the metal bezel, otherwise the elastomer connector could be deformed and lose contact, resulting in missing pixels and also cause rainbow on the display.
7. Be careful not to touch or swallow liquid crystal that might leak from a damaged cell. Any liquid crystal adheres to skin or clothes, wash it off immediately with soap and water.

Static Electricity Precautions:

1. CMOS-LSI is used for the module circuit; therefore operators should be grounded whenever he/she comes into contact with the module.
2. Do not touch any of the conductive parts such as the LSI pads; the copper leads on the PCB and the interface terminals with any parts of the human body.
3. Do not touch the connection terminals of the display with bare hand; it will cause disconnection or defective insulation of terminals.

4. The modules should be kept in anti-static bags or other containers resistant to static for storage.
5. Only properly grounded soldering irons should be used.
6. If an electric screwdriver is used, it should be grounded and shielded to prevent sparks.
7. The normal static prevention measures should be observed for work clothes and working benches.
8. Since dry air is inductive to static, a relative humidity of 50-60% is recommended.

Soldering Precautions:

1. Soldering should be performed only on the I/O terminals.
2. Use soldering irons with proper grounding and no leakage.
3. Soldering temperature: 330°C±10°C
4. Soldering time: 3 to 4 second.
5. Use eutectic solder with resin flux filling.
6. If flux is used, the LCD surface should be protected to avoid spattering flux.
7. Flux residue should be removed.

Operation Precautions:

1. The viewing angle can be adjusted by varying the LCD driving voltage Vo.
2. Since applied DC voltage causes electro-chemical reactions, which deteriorate the display, the applied pulse waveform should be a symmetric waveform such that no DC component remains. Be sure to use the specified operating voltage.
3. Driving voltage should be kept within specified range; excess voltage will shorten display life.
4. Response time increases with decrease in temperature.
5. Display color may be affected at temperatures above its operational range.
6. Keep the temperature within the specified range usage and storage. Excessive temperature and humidity could cause polarization degradation, polarizer peel-off or generate bubbles.
7. For long-term storage over 40°C is required, the relative humidity should be kept below 60%, and avoid direct sunlight.

Limited Warranty

Gemini LCDs and modules are not consumer products, but may be incorporated by Gemini's customers into consumer products or components thereof, Gemini does not warrant that its LCDs and components are fit for any such particular purpose.

1. The liability of Gemini is limited to repair or replacement on the terms set forth below. Gemini will not be responsible for any subsequent or consequential events or injury or damage to any personnel or user including third party personnel and/or user. Unless otherwise agreed in writing between Gemini and the customer, Gemini will only replace or repair any of its LCD which is found defective electrically or visually when inspected in accordance with Gemini general LCD inspection standard . (Copies available on request)
2. No warranty can be granted if any of the precautions state in handling liquid crystal display above has been disregarded. Broken glass, scratches on polarizer mechanical damages as well as defects that are caused accelerated environment tests are excluded from warranty.
3. In returning the LCD/LCM, they must be properly packaged; there should be detailed description of the failures or defect.

13. LCM TEST CRITERIA

1．Objective

The criteria is made for customer and company to check on delivery LCM end product, guarantee the production quality to meet with customer's demand.

2．Range

2.1 Suit for our company's LCD end production.

3．Testing equipment

Function tester、sliding calipers、microscope、visual magnifying glass、ESD arm protector、finger cover、label、 high-low temperature experiment case、refrigerator、fixed-voltage power supply（DC）, table lamp and so on.

4．Sampling plan and quote superscript

4.1.1 According to GB/T 2828.1---2003/ISO2859-1:1999，normal check of one sampling plan, general level of inspection II.

Testing item	Sample quantity	AQL judgment
cosmetic	II　one time sample	MA=0.4 MI=1.5
scale	N=3	C=0
function	II　one time sample	MA=0.4 MI=1.5

4．1．2 GB/T 2828.1---2003/ISO2859-1:1999 check and count the sampling procedure and table one by one.

4．1．3 GB/T 1619.96 Test method of twisting out LCD device.

4．1．4 GB/T 12848.91 General standard of super-out LCD device.

4．1．5 GB2421-89 Basic experience environment of electrical and electronic products

4．1．6 IPC-A-610C Check condition of electrical assemblies.

5．Test condition and basis

5．1　　visual：General under the condition of 25±5℃，45±20%RH，with enough light （>300cd/cm2）, the distance between operator and LCD is 30cm, use the method of reflective to test is normal，the backlight products, must test under the condition of luminance smaller than 100cd/cm2，and lit up the backlight.

5.2　The test left and right direction is 45°,up and down view angle is 0-45°
（STN depends on -20-55°）to have a test，as follows：

5.3　Viewing area definition

effective viewing area

un-effective viewing area
5.4　Naked eye examination（except with assistant of magnifying glass to do defect test）.
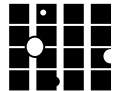

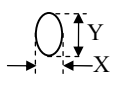

5.5　Electricity property

Testing use self-made/professional LCM test installation: contrast with the products file and designed drawing, ask for the display content and parameters accord with the document, and the result in line with the pattern

5.5.1　Testing voltage（V）：Refer to the requirement of test device，customer have no special statement, think the external circuit adjustable, effect controlled in agreed voltage fluctuation（without special agreement，accord to LCD driving voltage at 9V or bellowed control in±0.3V, above 9V, at least is LCD driving voltage ±3%），to the products with special voltage demand, assurance display effect through circuit adjust，when necessary made the maximum and minimum receivable samples.

5.5.2　Power consumption of electric current（I）：refer to product document or designed blueprint identify.

6．Defective item and testing criteria

6.1　Scale：To the whole cosmetic scale and which could influence the assemble position , should accord to the drawing, main defect.

6.2　capacity test:

order	item	description	MAJ	MIN	Accept standard

COB seal rubber should in white remark, the largest out scale can not exceed remark radius 2MM 4. COB surface has clear lien assemble mark, some even through the pinhole. 5. COB surface pinhole diameter over 0.25mm or have tainted..		√	reject
6.6.2	PCB cosmetic defect	1. PCB golden figure surface can not have oxidation, dirt. 2. PCB can not appear bubble caused by reflow. 3. PCB green oil drop /segment lead to leak copper. Use mending, circuit diameterψ can not over 1.3mm, other diameterψ can not over 2.6mm, total less than 10 point. otherwise reject.		√	reject

6.6.3	Components mistake	1. PCB components inconsistent with drawing. Find wrong pitch, more or less pitch, polar reverse（LCD voltage side circuit/BL current limit resistance modify, only if customer have special require，otherwise do not control） 2. The JUMP of PCB shot need refer to the structure picture, appear more or less soldering. 3. customer have special require on the component, mode specification and supplier should conform to technique demand. Otherwise reject.	√	√	reject

6.7　　SMT part （vague parts refer to IPC-A-610C）

Order	Item	Description	MAJ	MIN	Accept standard
6.7.1	Soldering defect	Cold solder, fake solder, missing solder，crack，tin un-dissolved		√	reject
6.7.2	Solder ball/bridge	Solder ball/bridge drop lead to spot short.		√	reject
6.7.3	DIP parts	DIP parts，keypad，connection appear flowing and tilted.		√	reject
6.7.4	Spot shape	Inner dent，can not form to cover solder or less solder, otherwise reject		√	reject
6.7.5	Component out reveal	After cutting, just left 0.5mm~2mm,can not damage solder surface and covered the component foot. Otherwise reject.		√	reject
6.7.6	Cosmetic defect	Solder residues appear tawny or coke black. PCB solder spot remained white mist residues after clean.		√	reject

6.8　　Thermal press part（contain H/S，FPC）

Order	item	description	MAJ	MIN	Accept standard
6.8.1	Model specifications do not match		√		reject
6.8.2	Scale/position	Material scale must in the drawing specification range，the contact area of dielectric material and the body（ITO，PDA）should be above 1/2，and the dislocation must control in specification		√	Accept
6.8.3	Thermal press dirt	Thermal area tainted can not lead to short,		√	accept

		OK，in through position， dirt area is smaller than 50%，OK。			
6.8.4	creases			√	Refer to limited sample

6.9　connection and other parts

order	item	description	MAJ	MIN	Accept standard
6.9.1	Specification un-matched	Connection and other components do not conform to drawing requirement	√		reject
6.9.2	Position and order	Solder position should consistent with the drawing .		√	reject
6.9.3	cosmetic	1. the body of our connect component and the PIN foot have solder-helping. 2. PIN connection PIN deformation bigger than PIN width 1/2.		√	reject

6.10　General visual

order	item	description	MAJ	MIN	Accept standard
6.10.1	Connect material	FPC golden figure or H/S,FFC out part of PIN leak copper or material, have damaged. FPC,FFC,COF,H/S connected material curved（except for original）. FPC、PCB golden figure bigger than 1PIN width. FPC/FFC material segment, crease exceed the specification.		√	reject
6.10.2	Protect defect	Protect film do not cover circuit totally（如 H/S，FFC，FPC） or not contact with interface, or add on PIN outer part.		√	reject
6.10.3	Visual dirty	The surface of end products have dirt, rubber，PCB/COB un-welding area has solder ball. The defective remark or label do not clean.		√	reject
6.10.4	Assembly black spot	Add backlight，taint and black spot		√	Refer to 6.3.1
6.10.5	Product remark	Model defer from approved remark and technique requirement、 position, vague and leak.		√	reject
6.10.6	Inner product packing	Packing inconsistent with requirement，segment short，wrong amount. And inconsistent with shipment remark/ order demand.		√	reject

7．Reality test

Test item	Condition	Time(hrs)	Accept standard
high temp storage	80°C	120	
high temperature operating	70°C	120	
low temperature storage	-30°C	120	Before and after test,
low temperature operating	-20°C	120	function and cosmetic is
temperature& humility test	40°C/ 90%RH	120	qualified.
temperature shock	-20°C ← 25°C →+70°C (30 min ← 5 min → 30min)	10 cycles	

Note：If customer have requirement, please put forward on the item development.（high/low temperature storage and experiment, the temperature refer to specific requirement），±5℃ deviation could be accept.

8．Packing

8.1 Product design must meet the requirement of packing design and check on delivery. Besides the product name, specification, model, quantity and date on the label, the quality chapter is necessary after checked by QA. Incomplete or mistake, is not qualified.

8.2 When the safety of the packing (earthquake, moisture-proof, anti-static, anti-squeezed) exist problem, not qualified.

8.3 When customer's special requirement is confirmed and accepted by interior，carry it out and check on delivery.

8.4 Environment protected and unprotected products must have obvious distinguished remark. The present remark adopts "RoHS". If customer have special requirement, use the appointed remark or label.

9．Others

9.1 No-provision or compromised item, depend on two side agreement and limited prototype.
